

Future proof

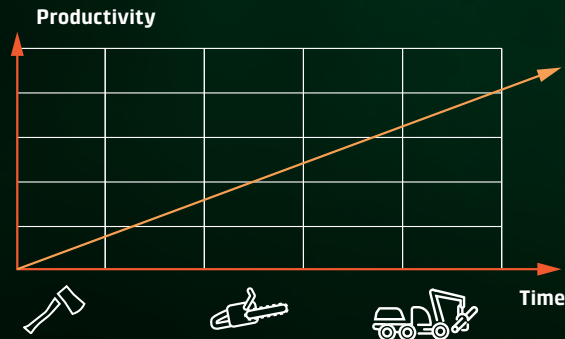

A new generation of harvest rotators

The forestry industry has undergone fabulous development and Indexator's rotators have played a very important part. We continue to help increase productivity and develop tomorrow's harvester rotators, bringing numerous benefits.

Our foremost materials experts, designers and production engineers are busy shaping the future today. But one unique technical solution opens up new capabilities and helps increase productivity. We are talking about a design where external loads are transferred through the outermost part of the rotator completely separate from the motor function. This significantly extends the rotator's service life and

makes machine ownership more profitable. With our new patent-pending technology, we're taking a step into the future. The new generation of Indexator rotators can handle radial and axial loads where the forces do not affect the motor. Importantly, it withstands negative loads extremely well. The modular design simplifies service and maintenance.

Advances in forestry have come fast. What was accomplished with hand tools and maybe a chainsaw a generation or so ago is carried out today by harvesters brimming with technology. Indexator continues to play an important part in this productivity trend.

External loads are transferred outside the motor function, which extends service life significantly.

**Smarter technology.
Increased productivity.**

Longer service life

Easy to service

**Handles radial and
axial forces**

**Withstands
negative loads**

**Low installation
height**

**Same interface
as today's
Indexator rotators**

Cost effective

PATENTED TORQUE TRANSFER

Thanks to the new generation's patented design and its floating torque transmission, external forces acting on the bearings do not affect the motor inside the Rotator. This significantly extends the rotator's service life and makes forestry more profitable.

Indexator Rotator Systems AB is a global leader in the manufacture of rotators, swivels and accessories. Today, Indexator is an extremely strong brand in the forestry, material handling and recycling industries all over the world. The company conducts world-class R&D that includes a dedicated, in-house test lab that international equipment manufacturers also turn to to develop new products and functions. We currently have 130 employees and annual sales of around SEK 230 million. A high proportion of our sales go to export, with around 80 per cent of production being sold to more than 40 markets around the world.
